

Press Release

ScanTech AI Systems showcased SENTINEL® CT integrated into unival group's uniXPASS 360 at World Nuclear Exhibition 2025

Paris, France - November 2025: During the World Nuclear Exhibition (WNE) held from 4 to 6 November 2025 in Paris, ScanTech AI Systems Inc. showcased its SENTINEL® CT Checkpoint Property Screening System, integrated into unival group's **uniXPASS 360** visitor and access control solution. The integration demonstrated how advanced computed tomography (CT) screening can be combined with intelligent access management to enhance security, efficiency, and user experience at controlled facilities.

The SENTINEL® CT system employs a fixed-gantry CT configuration that improves detection accuracy, reliability, and operational efficiency. Its AI-based imaging enables fast and precise identification of threats while maintaining high throughput and low maintenance requirements.

unival group, a German manufacturer and integrator of comprehensive security technologies, features SENTINEL as part of its global technology partnerships in screening and inspection. Within **uniXPASS 360**, the system contributes to a connected framework that unites visitor registration, baggage inspection, people screening, and compliance control into one intelligent platform, designed to optimize the flow of people and goods in high-security environments.

"Our collaboration with ScanTech AI Systems demonstrates how intelligent integration can deliver practical value to customers who operate in sensitive environments," said David Vollmar, Managing Director of unival group GmbH. *"By combining the SENTINEL CT with our **uniXPASS 360** platform, we create a powerful solution that strengthens operational safety and simplifies visitor management."*

unival group expressed its appreciation to ScanTech AI Systems for the collaboration and the opportunity to present the integrated solution at the event.

About ScanTech AI Systems Inc.

ScanTech AI Systems Inc. is a Canadian technology company specializing in computed tomography (CT) security screening solutions. The company focuses on applying AI and multi-energy X-ray technologies to improve detection performance, speed, and efficiency in aviation, border, correctional, and critical infrastructure environments. With its SENTINEL® series, ScanTech provides innovative and reliable solutions that address the evolving needs of global security.
