SECURITY MADE IN GERMANY

WHO WE ARE

RETHINKING SECURITY – FROM A SINGLE SOURCE

We help organizations manage complex security environments with integrated solutions that reduce risk and improve operational efficiency.

We connect screening, access control, monitoring, and command systems into one unified security architecture, supported by our proprietary software.

THIS APPROACH IS BUILT ON

- OEM manufacturing combined with system integration
- Sensor-agnostic architecture for maximum flexibility
- Design based on real operational requirements

RESULTS

- Reduced operational risk in critical infrastructures
- Higher throughput without compromising security
- Full control over systems, data, and processes
- Seamless integration into existing Environments

**MORE SECURITY.
LESS COMPLEXITY.
FULL CONTROL.**

THE unival X-FACTOR

TECHNOLOGY + INTEGRATION + OPERATIONS

WE COMBINE THREE CORE CAPABILITIES IN ONE SYSTEM

- Proprietary technologies (OEM expertise)
- End-to-end system integration
- Deep understanding of real-world operations

Unlike traditional vendors, we deliver fully integrated systems - not isolated products.

MAXIMUM PERFORMANCE WITH MINIMAL OPERATIONAL FRICTION.

eXPOSE

Detect threats early, before they become crises

eXPAND

Scale and adapt your security as your needs evolve

eXECUTE

Operate with automation, precision, and insight

As a result we aim for nothing less than **eXCELLENCE**. Delivering reliable performance through quality and experience and trust!

6 AREAS OF FOCUS

AIRPORT AND AVIATION SOLUTIONS

unival group delivers integrated security systems designed for airport environments, ensuring safe, efficient, and fully controlled operations from terminal entry to airside access. Our technologies combine intelligent screening, access management, and command integration to protect passengers, assets, and infrastructure at every level.

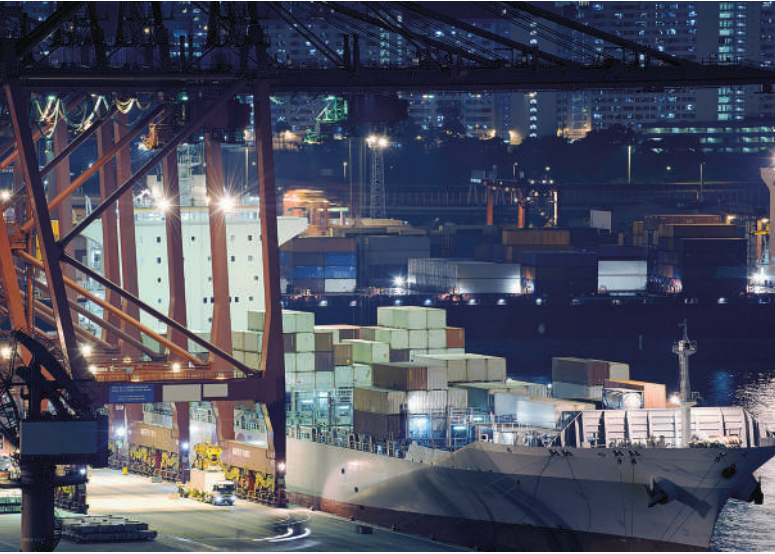

CRITICAL INFRASTRUCTURE PROTECTION

Critical infrastructure such as power plants, data centers, transport hubs, and industrial sites must stay secure against physical, digital, and insider threats. unival group connects screening, access control, monitoring, and command platforms so operators keep clear control over every entry point, process, and alarm across their facilities.

URBAN SURVEILLANCE & SMART-CITY SECURITY

unival group delivers complete urban surveillance and smart city security solutions that combine monitoring, analytics, and communication to support safe and well managed public spaces. Our systems help authorities detect risks early, coordinate responses, and gain practical insights that strengthen security, mobility, and overall city operations.

LAND BORDER AND SEAPORT SOLUTIONS

unival group provides integrated security systems that enhance inspection, monitoring, and control at border crossings and seaports. Our technologies ensure efficient flow of trade and transport while maintaining high levels of security, transparency, and operational awareness across customs, cargo, and passenger areas.

OIL, GAS AND ENERGY FACILITIES SOLUTIONS

unival group delivers security and monitoring solutions that strengthen protection for oil, gas and energy facilities. Our systems combine perimeter control, screening, counter surveillance, drone defense, and central command tools to support safe operations and fast response across complex sites.

VIP PROTECTION AND EVENT SECURITY

unival group supports VIP protection teams and event organizers with discreet security solutions that manage people flow, detect threats early, and maintain control across dynamic environments. Our systems bring together screening, counter monitoring, mobile security, and central oversight to help safeguard high profile individuals, venues, and critical activities.

THE POWER OF CHOICE

WHAT IS THE POWER OF CHOICE?

At unival group, we believe clients should have the freedom to choose what works best. We integrate technologies from multiple trusted vendors, not just our own, to design solutions tailored to each mission, environment, and budget.

As both an OEM manufacturer and independent system integrator, we select every component based on performance, reliability, and operational fit.

Most providers are limited to their own products. unival is not. We combine in-house technologies with best-in-class partner systems to deliver the most effective solution.

IN PRACTICE

- No vendor lock-in
- Systems built around operational needs
- Flexibility to adapt and scale

**IN SECURITY,
CHOICE IS NOT
A LUXURY. IT
IS A STRATEGIC
ADVANTAGE.**

6 PRODUCT DIVISIONS

SCREENING

The screening of vehicles, cargo, people, and baggage has become increasingly important in recent years. Detecting human trafficking, illegal weapons, contraband, and other threats is essential for secure and resilient societies. With uniXGATE, unival group provides a modular, multi-level screening checkpoint architecture based on the X-Factor framework: eXPOSE, eXPAND, and eXECUTE. This ensures reliable threat detection, adaptability to changing requirements, and efficient, consistent operations.

MOBILE SECURITY

With decade-long experience in high-end security solutions, unival group originated from a German engineering environment focused on protecting VVIP personnel - from public figures to heads of state. As operational requirements evolved, the demand shifted toward mobile and modular security solutions that offer greater flexibility across a wide range of missions. In response, unival began developing its own vehicle-integrated security systems, designed to support diverse operational scenarios.

COUNTER MEASURE

For more than 15 years, unival group has been designing and manufacturing technologies for the international homeland security sector. As an innovator in RF jamming systems, unival group provides outstanding performance and durability in challenging environments and jamming operations. All unival group products are designed and manufactured in-house to ensure the highest degree of performance and workmanship.

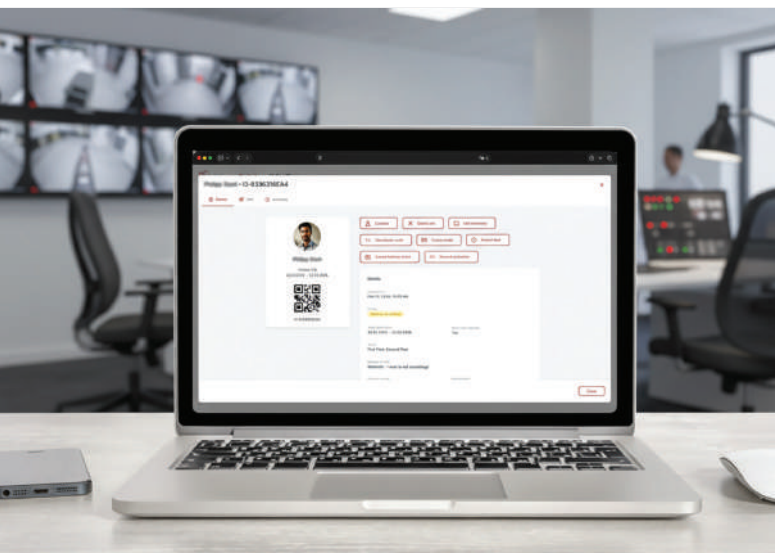

COUNTER MONITORING

Effective counter monitoring and information protection require a clear understanding of the electromagnetic environment and the ability to identify, assess, and control unauthorized signals. Spectrum monitoring goes beyond detection, helping prevent information leakage, detect covert surveillance, and secure communication channels in operational, governmental, and critical infrastructure environments.

SURVEILLANCE & CONNECTIVITY

Smart Infrastructure & Surveillance includes unival systems designed to enable continuous monitoring, controlled access, and coordinated response across fixed facilities and distributed environments. These solutions combine sensing, access control, and command functions within structured security architectures that support both routine operations and incident response.

SOFTWARE DEVELOPMENT

Software development within unival group GmbH is handled by r3levance Solutions GmbH, the group's dedicated software and digital integration company in Bonn, Germany. As a subsidiary, r3levance develops frameworks and applications that support integrated physical and digital security solutions, focusing on identity management, access governance, data integration, and operational security in complex environments.

IDENTITY MANAGEMENT FOR DATA SOVEREIGNTY

In a world where data moves across borders, clouds, and jurisdictions, identity is the key control point. Managing identities - users, devices, systems, and applications - means controlling access, trust, and authority Available as a sovereign cloud solution or fully on-premises within controlled infrastructure. **uniXPASS - our solution for true operational autonomy**

Visitor Management encompasses systems and processes to register, control, monitor, and document visitors in controlled environments. It enables organizations to manage access for guests, contractors, and temporary personnel while ensuring security, accountability, and efficiency. Platforms like uniXPASS provide a centralized digital foundation across various facility types.

uniXPASS

ACCESS SECURITY

uniXPASS is a digital identity and access management platform for secure control of people, vehicles, and credentials across facilities and critical infrastructure. It enables identity verification, access governance, and full traceability at all entry points. The platform manages the complete access lifecycle - from pre-registration and credential issuance to controlled entry,

on-site movement, and exit. Configurable workflows and centralized monitoring ensure consistent policy enforcement and clear operational oversight. Designed for corporate, high-security, and dynamic environments, uniXPASS integrates seamlessly with access control, screening, and monitoring systems, providing a unified and controlled security environment.

OUR MISSION STATEMENT

At unival group, we design and integrate intelligent security systems that protect all operational layers - combining screening, access control, sensing, data management, and command platforms into a connected 360° approach.

Our solutions adapt to evolving threats and technologies, selecting the right components for each project and supporting them with training, capacity building, and flexible project management for fast, high-quality results.

We aim to set global security standards by combining advanced technologies, intelligent software, and sustainable financing into solutions that deliver 360° protection, efficiency, and long-term trust for governments, industries, and critical infrastructure. Guided by the unival X-Factor, we unite OEM expertise and global integration to offer full choice, transparent quality, and complete control.
