

PRESS RELEASE

MEET unival's SECURITY EXPERTS AT ASEC2026

Bonn, Germany – 01 July 2026

SECURITY FIRST: ENABLING BUSINESS CONTINUITY AND RESILIENT GROWTH ACROSS AFRICA

As Africa experiences unprecedented economic growth, infrastructure investment and regional integration, governments and multinational organisations face an increasingly complex security environment. Protecting critical infrastructure, maintaining operational continuity and ensuring resilient trade and commerce have become strategic priorities for sustainable development.

At the **Africa Security Symposium (ASEC2026)** in Accra, Ghana, from **7–9 July 2026**, **unival group**, a German provider of integrated security solutions, will present practical technologies and operational concepts designed to help governments, critical infrastructure operators and international organisations protect critical assets, infrastructure and operations.

As a **Gold Sponsor**, unival invites government representatives, security professionals, infrastructure operators and corporate decision-makers to visit **Booth 26** and engage directly with the unival team.

Security as a Foundation for Economic Growth

Today's threats extend far beyond traditional crime. Terrorism, organised crime, illicit trafficking, cyber-physical attacks, infrastructure sabotage and geopolitical instability increasingly challenge governments and businesses alike.

Security has become an operational requirement for organisations seeking to protect critical infrastructure, maintain business continuity and minimise disruption.

Whether securing an international airport, a seaport, a border crossing, an energy facility or a multinational manufacturing operation, uninterrupted operations are essential for economic growth, investor confidence and national resilience.

Security First has therefore become a strategic business principle rather than simply a security objective.

Integrated Security for Governments and Industry

unival group delivers integrated security solutions that connect technologies, people and operational processes into a unified security architecture.

Visitors to ASEC2026 will discover solutions including:

- Integrated Border Security and Customs Modernisation
- Airport and Seaport Security
- Critical Infrastructure Protection
- Mobile and Relocatable Security Checkpoints
- Cargo, Vehicle, Baggage and Personnel Screening
- Digital Identity and Access Management
- Command, Control and Operational Intelligence (C2/C4I)
- AI-enabled Threat Detection and Security Automation
- Counter-UAS and Counter-Drone Technologies
- Security Integration Platforms and Operational Software

Rather than deploying standalone products, unival designs complete operational environments that improve situational awareness, accelerate decision-making and strengthen resilience under both normal operations and crisis conditions.

Supporting Africa's Long Term Development

Africa continues to attract significant investment across energy, mining, transportation, logistics, manufacturing and digital infrastructure.

As multinational organisations expand across the continent, the ability to protect personnel, assets and supply chains becomes a critical success factor.

At the same time, governments are investing heavily in border modernisation, critical infrastructure protection and smart national security capabilities.

unival works alongside both public and private sector organisations to develop scalable security solutions that support economic development while strengthening national resilience.

Meet Our Security Experts

Throughout ASEC2026, visitors will have the opportunity to meet unival's security specialists to discuss real operational challenges, exchange ideas and explore practical approaches to protecting critical infrastructure and maintaining business continuity.

A highlight of the symposium will be the keynote presentation by Fidel Amakye Owusu, Security Advisor (Africa), titled "Security Challenges and Opportunities Across Africa."

The presentation will examine how integrated security technologies, regional cooperation and intelligent operational platforms can support Africa's continued growth while addressing evolving security risks.

A Commitment to Africa

"Across Africa we see governments and businesses investing in infrastructure, trade and economic development at an unprecedented pace. Protecting these investments requires more than individual security products. It also requires integrated security strategies that maintain operational continuity under increasingly complex conditions.

Our mission is to help governments and organisations develop integrated security solutions that protect people, infrastructure and commerce while enabling sustainable growth. We look forward to welcoming visitors to ASEC2026 and discussing how we can support Africa's security future."
